

Godot 2D Game

Prerequisites

Before you can start making 2D games in Godot, you will need to download the Godot game engine from <https://godotengine.org/>

If you have an older PC or want to support older PCs older than Windows 7, you will need to download Godot 2 from the older downloads section of the Godot website, otherwise you can download Godot 3. In order to be all inclusive, I will provide both Godot 2 and Godot 3 versions of this tutorial series. Simply choose one of the 2 links at the bottom of this page to go to the first lesson that corresponds to the Godot version you chose.

Once you have downloaded Godot, simply unzip the archive or tarball and you will have a single program called something like "Godot_{version}-stable_{platform}" where the words in curly braces are specific to the Godot version and your OS.

Now you are ready for the first lesson.
